The Journal of Decision Systems publishes original articles in English and French which extend or consolidate scientific knowledge related to decision making processes and decision systems in organisations. The main purpose of the Journal is to be a forum for researchers and practitioners who study how organizations make decisions and who design, implement and evaluate computer-based decision systems. Therefore, papers on Decision Theory, Computer Science, Artificial Intelligence and Operation Research will be considered particularly if they are directly related to actual decision situations. In addition, the Journal will publish original case studies of organizational decision making and decision support.

**Organisational Self-Assessment for IT Innovation Adoption**
